XBOX CONTROLLER

Xbox Wireless Controller · Star Citizen layout form · fill it in, drop it on the website, get your profile

MAKE YOUR OWN LAYOUT

1. **Fill in page 2**
   Every box is a dropdown. Pick a Star Citizen action for each button, in flight and on foot, with and without LB held.
   Leave a box empty for nothing. The filled version starts from our starter layout: change only what you want.

2. **Save it**
   Open this PDF in Acrobat Reader, Chrome, Edge or Preview on a Mac, fill it in, then save (Ctrl+S / Cmd+S).
   Use Save, not Print. Printing to PDF throws the boxes away.

3. **Drop it on the website**
   Go to absolutegaming.store/starcitizen5.html and drop the PDF on the XML generator.
   It is read in your browser and never uploaded. Check the review table, then download your profile.

4. **Copy the profile into the game**
   Put layout_AbsoluteGaming_Gamepad.xml (or the file the generator made you) in your mappings folder:
   Roberts Space Industries\StarCitizen\LIVE\user\client\0\controls\mappings

5. **Load it**
   Open the console with ~ and run, with no .xml on the end: pp_rebindkeys layout_AbsoluteGaming_Gamepad
   Or use Options > Keybindings > Advanced Controls Customization > Control Profiles and load it there.

GOOD TO KNOW

- The sticks are set for you: left stick throttle and yaw in a ship, move on foot; right stick pitch and roll, look on foot.
- The "hold LB" columns are LB plus that button. LB itself is the modifier, so it has no box in those columns.
- Flight boxes also cover ground vehicles where Star Citizen shares the action. On-foot boxes work in the hangar, stations and EVA.
- The same button can do one thing in flight and another on foot. Two actions on one button in the same column will clash.
